DETAILED ACTION
ELECTION REQUIREMENT

Applicant's election of the specie polynucleic acid microarrays (claims 1-4, 6-11, and 18-21) in the Paper filed 10/10/03 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

VAGUENESS AND INDEFINITENESS

Claims 1-4, 6-11, and 18-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 1-2, the method is directed to discovering "new" compounds with expression profile-altering activity. Consideration of the actual active claim steps (a) – (d) reveals that there is therein no citation of a "new" compound. Thus, the claim is unclear as to what controls the metes and bounds of the claim, the preamble or the actual active claim steps because they differ in metes and bounds. It is further explained that two interpretations are reasonably applied to what is meant by "new" compound in line 1 of claim 1. One interpretation is that the compound is actually known in the art but not yet identified as to expression profile-altering activity. Another interpretation is that the compound has not been discovered for any purposes and is not known in the art. This unclarity also includes the above confusion as to what is meant by "new" compound. Claims which depend directly or indirectly from claim 1 are also

rejected hereinunder due to their dependence. Clarification is requested via clearer claim wording.

PRIOR ART

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 4, 6-9, and 18-21 are rejected under 35 U.S.C. 102(e)(2) as being clearly anticipated by Daniel et al. (P/N 6,368,794).

Daniel et al. summarizes the invention in the abstract as monitoring by altered gene expression. Daniel et al. describes the detection of gene expression via microarray nucleic acid (polynucleic acid as instantly cited) hybridization as disclosed in column 2, lines 25-32, as is the instantly elected specie of expression monitoring. The expression profiling practice of the instant invention wherein various pharmaceutical compositions are useful in treatment is cited in the reference in the bridging paragraph between columns 2 and 3. Daniel et al. discloses the preparation of multiple profiles of different cell parameters in the bridging paragraph between columns 1 and 2 as also included in the instant claim practice which span the range of cancerous to precancerous to noncancerous. The third expression profile comparison to the diseased profile and to the nondiseased profiles for monitoring analyte treatment

Art Unit: 1631

efficacy is disclosed in the reference in column 2, lines 43-57, and especially in lines 54-57 as is the basic detection practice of the instant claims. It is noted that the above unclarity of metes and bounds rejection supports this rejection in that the reference discloses the practice of the actual active instant claim steps.

No claim is allowed.
